

Thermal Windows, Inc. Gives Habitat for Humanity a Helping Hand

Tulsa Habitat for Humanity is a non-profit organization that helps less fortunate families finance and build homes. The future homeowners contribute a minimum of 500 hours of “sweat equity” by helping with the actual construction of the home. Some of the materials and labor are donated by local companies and individuals. The rest is purchased by Habitat, and the new homeowners pay for it as part of the 30-year mortgage. As a result, these hard-working and deserving families become proud homeowners, and it costs them less than renting.

Habitat Homes – Before & After

Left: 3710 W. 52nd Place, under construction. Right: The house next door, completed by Habitat last year. Both have Thermal 700 Series double hungs in Clear Anodized finish.

3710 W. 52nd Place in West Tulsa (pictured) is the 87th house Tulsa Habitat for Humanity has built. Thermal Windows, Inc. has been a strong supporter of the program for several years, through donations of more than 240 windows, in 30 home, with more to come. On Saturday, April 24, 2003, Thermal employees Gary Hoops, Dwight Escoe and Dan Simpson spent the morning installing windows in the house. They installed all seven windows in less than an hour. This really impressed the Habitat folks, who said it would have taken them half a day to do the same job. The Thermal installation crew also passed on good installation techniques and tips on how to frame, measure and trim the window openings on future Habitat homes.

The same day, John Watts, construction manager for the Habitat house project, was interviewed live by the news department of KRMG radio. He was very complimentary about Thermal Windows, Inc.'s generosity and the quality of their products.
