

POST-RENOVATION CLEANING VERIFICATION

Customer Name(s): _____ Date of Verification: _____

Job Address: _____

STEP ONE FOR INTERIOR AND EXTERIOR WORK: VISUAL INSPECTION

The Certified Renovator has performed a detailed visual inspection of all work areas and states as follows [select one]:

- Visual inspection PASSED.** Dust, debris, or residue **was not present** at any work area at time of inspection.
- Visual inspection PASSED following re-cleaning(s).** Dust, debris, or residue **was present** at one or more work areas at time of inspection. The affected work area(s) was re-cleaned one or more times. Subsequent visual inspections were performed, and it was determined that no dust, debris, or residue was then present at the affected work area(s) at time of last inspection.
- Visual inspection FAILED despite re-cleaning(s).** Dust, debris, or residue **was present** at one or more work areas at time of inspection. The affected work area(s) was re-cleaned one or more times. Subsequent visual inspections were performed, and it was determined that dust, debris, or residue remained present at one or more affected work area(s) at time of last inspection.

STEP TWO FOR INTERIOR WORK: WINDOWSILLS, UNCARPETED FLOORS AND COUNTERTOPS

The Certified Renovator has wiped each windowsill, uncarpeted floor and countertop with an approved wet disposable cleaning cloth that was damp to the touch, and then compared each cloth to an EPA-approved cleaning verification card. The Certified Renovator now states as follows [select one]:

- ALL WET CLOTH TESTS PASSED.** Each cloth matched the appearance or was lighter in appearance than the EPA-approved cleaning verification card.
- ALL WET CLOTH TESTS PASSED FOLLOWING RE-CLEANING.** One or more tests performed resulted in cloths that were darker in appearance than the EPA-approved cleaning verification card. The affected areas were re-cleaned. Subsequent tests were performed, and each test resulted in a cloth that then matched the appearance or was lighter in appearance than the EPA-approved cleaning verification card.
- DRY CLOTH UTILIZED FOLLOWING DELAYED RE-INSPECTION.** One or more tests performed resulted in cloths that were darker in appearance than the EPA-approved cleaning verification card, notwithstanding re-cleaning of the affected areas. Following a delay of one (1) hour (or until the surface had dried completely, whichever was longer), each affected location was then wiped with a dry disposable cleaning cloth.

Total of number of wet cloths used: _____

Total of number of dry cloths used: _____
