

MANUFACTURER'S INSTALLATION INSTRUCTIONS WITH NAILING FIN

*Windows shall be securely anchored in place to a straight, plumb and level condition without distortion.

*Windows shall be attached with minimum #8 non-rust-plated screws (larger as required by project conditions) at the:

- a)Head - 2" from each end and at 16" centers of fin.
- b)Jambs - 2" from each end and at 16" centers of fin.
- c)Sill- 2" from each end and at 16" centers of fin

Note: Fasteners must be installed so as not to cause the window to warp or bind.

*Windows shall be blocked and shimmed as needed to provide a sound surface for installation.

*Window perimeters shall be sealed at the exterior and interior with the approved caulking compound.

*Windows shall be checked for proper operation and necessary adjustments made to insure proper operation.
